These days, one of the most popular virtual assistants is Amazon's Alexa, which is now in millions of homes across the globe. When it comes to setting timers and alarms, tapping into your Amazon's Alexa, which is now-ubiquitous virtual assistants is Amazon's Alexa, which is now in millions of homes across the globe. When it comes to setting timers and alarms, tapping into your Amazon's Alexa, which is now in millions of homes across the globe. come to be? And, perhaps the more pressing question: are smart home features like Alexa safe? What Is Amazon's Alexa? As mentioned earlier, intelligence (A.I.) assistants — or artificial intelligence (A.I.) assistants — are commonplace these days. Using an A.I. system, these assistants, like Siri or Google Assistant, emulate human interactions and complete tasks for us. First introduced in 2014, Alexa is Amazon's foray into the virtual assistant realm. While Apple's Siri is known for being in the palm of your hand a la your iPhone, Amazon's Alexa — and Alexa Voice Services (AVS) — can be found in an abundance of the company's smart tech products, including various iterations of the Amazon Echo as well as the Amazon Fire TV. Photo Courtesy: Marko Gerber/Getty Images But the smart home functionality doesn't stop with your devices. In fact, Alexa-enabled light switches, security cameras, speakers, lamps, thermostats, and soundbars are used by millions. So, what can Alexa do to help? The possibilities are (almost) endless, especially considering that the Alexa Skill Kit allows you to mold the virtual assistant's features to your particular lifestyle needs. Some of the AI's most popular features include: Finding recipesReading your emailsAnswering questionsSolving math problemsProviding news updatesTracking Amazon packagesSetting up reminders, timers and alarmsShopping (and re-ordering) products onlineAccessing music, videos and other contentEnabling video cameras for security purposesCalling or messaging contacts, no typing neededIntegrating with smart-home tech, including lights, speakers, alarms and more So, why did Amazon call its virtual assistant Alexa? According to the company, it's a tribute to the Library of Alexandria, which, centuries ago, was intended to hold the world's knowledge. Much like this ancient library, Alexa collects information — and learns. An added bonus? The letter "X" isn't all that common in the English language, which makes things a little less confusing since saying, "Alexa" actually "wakes up" your virtual assistant. Photo Courtesy: Bloomberg/Getty Images Of course, if you know an Alexa, you can change that "wake word" to something less commonplace. Still, that moniker is what the virtual assistant is known as — and it's the default name. So, is there a voice actor behind Amazon's virtual assistant? According to Alexa's creator, Amazon exec Toni Reid, the virtual assistant's voice actually comes from text-to-speech technology. That's to say that there isn't a real person behind that default Alexa voice. Still, the voice has been coded female or, in other words, has a voice that expresses what are typically thought of in western society as feminine traits. This choice certainly underlines the gender bias that has seeped into A.I. and left some wondering if intelligent voice assistants are doing the not-so-smart thing of continuing to normalize the subservience of women, especially since the bulk of our exchanges with these assistants boils down to commands. "An algorithm is an opinion expressed in code," Ivana Bartoletti, founder of the networking group Women Leading in A.I., told The Guardian. "If it's mostly men developing the algorithm, then of course the results will be biased... You're teaching the machine how to make a decision." While other virtual assistants, like Siri and Google Assistant, allow you to change the default voice and accents, Amazon has taken things a step further. Recently, the company has employed celebrities, like Avengers star Samuel L. Jackson, to lend their voices on Alexa-powered devices," Amazon will "use recordings the stars provide as the basis for other computergenerated utterances" (via BBC). In other words, if you've ever wanted Jackson to "roast you" or quote Pulp Fiction, that's now a possibility. Other celebrity voices can handle small tasks, but the standard Alexa voice will take over for more complicated requests. Is Amazon's Virtual Assistant Safe? As with any new technology, Alexa has been met with some mistrust and uncertainty. (After all, we all remember Disney Channel's Smart House, right?) Still, that hasn't deterred millions from purchasing an Alexa-powered device. In fact, according to NBC News, an impressive "one-quarter of American households now have an Amazon Echo powered by Alexa." Photo Courtesy: Marko Geber/Getty Images In 2018, a Portland family raised some serious concerns about Alexa and their personal security. "My husband and I would joke and say 'I'd bet these devices are listening to what we're saying,'" Danielle [redacted] told a local news outlet. But that joke evolved into something much more concerning: during a conversation about hardwood floors, someone in the household uttered something about sending a message, so it dutifully recorded their conversation and forwarded it to someone on their contact list. Not optimal. Danielle called the moment "a total privacy invasion," and although it was an easily traceable mistake, it still gave many would-be Echo owners pause. Reportedly, Alexa isn't recording your conversations to spy on you. Instead, the assistant is recording for short bursts of time, so that what you say is sent back to the Amazon computer system; this information is then used to provide you with an answer or help complete a task. "Amazon says it keeps our recordings to improve products, not to sell them," technology columnist Geoffrey A. Fowler wrote in The Washington Post — a paper owned by Amazon CEO Jeff Bezos. "But anytime personal data sticks around, it's a risk." "Alexa is always getting smarter, which is only possible by training [the virtual assistant] with voice recordings to better understand requests, provide more accurate responses, and personalize the customer experience," Beatrice Geoffrin, director of Alexa privacy, said in a statement. But is better customer experience, and personalize the customer experience expe invasion of privacy — that supposedly encrypted archive of conversations you've had with Alexa? Alexa and the Future of A.I. If you've ever wondered what a smart home of the future will look like, Alexa has made all of those Space Age imaginings feel all the more feasible, instead of just some sci-fi pipe dream. In addition to smart televisions, cameras, home security systems, soundbars, and lighting, Alexa, and other virtual assistants, is entering the world of appliances and cars as well. Photo Courtesy: kate_sept2004/Getty Images Have you ever wanted to speak to your fridge or oven? Alexa will be able to help with that. Meanwhile, Amazon has also struck a deal with major auto manufacturers, ensuring that it's Each Auto technology will bring all that virtual assistant convenience and functionality on the road. Without a doubt, Alexa's voice-activated technology is here to stay. And the potential of these virtual assistants will just keep growing. MORE FROM ASK.COM Alexa is Amazon's digital voice assistant, and is becoming an ever-present AI helper in our homes, phones and even cars. The basic premise of Amazon's voice assistant is simple - you ask questions, give commands and receive responses - but there's a surprising amount of depth to its capabilities and, if you recently unboxed an Echo smart speaker, then you might be wondering exactly how to get started with an Alexa smart home. This is where our Amazon Alexa guide comes in. We'll be talking through very basics, such as how to set your Alexa device up, what you can do and whether you need to know need to know to set your Alexa device up, what you can do and whether you need to know need to know to set your Alexa device up, what you can do and whether you need to know need to kno about Alexa. Alexa features: what can Alexa do? The popularity of Amazon Echo speakers is causing a lot of people to jump on the bandwagon – and then ask, "What can Alexa actually do?". The beauty of those first weeks is trying things out, and being pleasantly surprised. However, here's a helpful cheat sheet for things to do with your Alexa speaker Play radio stationsStream music from Spotify, Apple Music and more Play podcastsSet timers and alarmsGet tailored news reportsAsk web-based questionsControl smart home devices with your voiceGroup together smart home devices to work together using single commandsMake calls to contacts' phones Intercom between Echo speakers in your homePlay gamesPlay sleep music or ambient sounds (and toggle off automatically)Allow you to control a TV / AV system with your voiceAdd extra layers to your smart security systemCare for an elderly relativeMost people use their Amazon Echo smart speaker to listen to radio stations, stream music, set timers and alarms and control smart home devices, including smart lights, connected thermostats and appliances. Of course, Alexa can also search the web and offer flash news briefings, weather reports, sports scores and more. It's a very versatile system. Alexa Calling and Drop In are both great way to stay in touch with those in your home, using your Alexa device as an intercom from room to room, and even house to house. And there are new Alexa features being added all the time. The Amazon Echo Show range and the ageing Echo Spot, with their displays, can show security cameras and let you check who's at the door. Another really important thing to be aware of is that you don't need to pay to use Alexa. Whether you want to set up an account and use the app, download skills or connect to other devices, there's no kind of monthly fee attached to the Amazon ecosystem. The only things you need to be aware of, with regard to payments, is that linked subscription services (like Spotify Premium) will still require you to pay for full support, and you can also use your Echo speaker to shop (more on that below). How to set up your Alexa speaker Setting your Amazon Alexa speaker set up and ready to go is pretty hassle free. Just follow these steps. This will work for standard Amazon Echo Dot speakers, which are the most popular. Echo Show devices, such as the new Echo Show 10, need to be plugged in and you follow the on-screen instructions. You'll still need the Alexa smartphone app though. 1. Download the Alexa app on your smartphone or tablet. It's available via iOS/Android and of course there's a Fire OS version if you own one of Amazon's own devices. You'll need to log in with your Amazon ID (we're assuming you have one, or you'll need to create one), and this will now be your account for Alexa. Naturally, if you have an Amazon Echo you're going to be adding. 3. Now just plug in your Alexa device and sit back and wait. It will go through its cycle, displaying a spinning blue light before changing back to orange. This means it's in pairing mode, so in the Alexa app feed it your Wi-Fi settings. You can opt for these to be stored and used by future speakers at set up. 4. If you need to put your speaker back into pairing mode then just press the button on the top. 5. You're now good to go – just say "Alexa" and look below for some cool things to ask. Using the Alexa appThe Alexa app to make changes to things like smart home devices, routines or logging into services. HomeThe new Home screen has been totally redesigned to be more useful. You can now speak to Alexa by hitting the button at the top, which is useful if you want to run a routine while away from a smart speaker. Then there's a list of suggestions, from frequently played media and radio stations access to lists and shopping, and quick-links to creating things like Alexa routines. CommunicateThis tab enables you to quickly drop in and call Alexa devices in your home, and those of friends and family. What's more, you can also create Announcements (useful if you're not at home), view the cameras of compatible devices, and make calls. PlayThe Play tab is the home of media via Alexa, which will mix up between commonly used sources. This could be radio stations from TuneIn, Spotify playlists, Amazon Music tracks – all in one place. It's not the most useful tab, surely just ask Alexa or head to your normal apps – but it's a nice way to see what you've listened to in one place. DevicesThe meat and drink of the Alexa app in terms of the smart home, this tab is home to the settings for all your Alexa speakers, and any smart home devices, Wi-Fi network and location data, and manage device groups and check out smart bulbs, plugs and other devices that are being controlled by Alexa. MoreMore is a new menu within the app that used to be part of the main menu. From here you can find: ListsReminders/alarmsRoutinesAlexa SkillsSettingsBest Amazon Echo commandsThere are so many Alexa commands for so many types of people, it would take an entire feature to list the best – and luckily, we've done just that in our essential guide. But if you've just fired up your Amazon Echo for the first time, don't be dumbstruck. "Alexa, set alarm for 7.30am" and then "Alexa, snooze!" "Alexa, set alarm for 7.30am" and then "Alexa, set alarm for 7.30am" and then "Alexa, snooze!" "Alexa, set alarm for 7.30am" and then "Alexa, set alarm for 7.30am" and then "Alexa, snooze!" "Alexa, set alarm for 7.30am" and then "Alexa, snooze!" "Alexa, so timer for [x] minutes." "Alexa, what's in the news?"While these are some simple ideas to get started, check out our full guide to Amazon Alexa commands to become a power user. Essential Amazon Alexa skills and extra features and connect with smart home products – and these are the secret to making your Echo be more than just what happens out of the box. Think of skills as like the apps you install on your smartphone – there's a huge collection of different ones to choose from. We've devoted an entire article to Alexa skills, but here are five to get you started. Amazon Story TimeJust ask "Alexa, ask Amazon Storytime to read me a story" to get a narrated story – aimed at kids between 5-12 – from the Amazon Rapids app library and Audible. BBC NewsGet the latest world headlines from the BBC World Service added to your flash briefing. Just say "Alexa, tell Big Sky to give me a weather fact". Ambient Sounds: VariousIf you want something to drift off to sleep to, say "Alexa play ocean sounds"; you'll get a list of the entire range of ambient sounds. Otherwise, just say "Alexa play ocean sounds" to go straight to the water's edge. Spotify The daddy of music skills for Amazon Alexa devices, Spotify can be can be selected as a default music destination and play all your tunes. Apple MusicOnly a recent addition to the pack, Apple Music is now a live skill through Alexa – and you can make it your default player, just like Amazon Music Unlimited and Spotify. Check out our round-up of essential Amazon Echo Skills you need to download. Brilliant Amazon Echo Easter eggsUnlike many voice assistants, Alexa, and you can see a better run down in our dedicated Amazon Alexa, I'm home""Alexa, talk like Yoda" "Alexa, roll a dice" "Alexa, play 20 questions" Check out more funny things to ask Alexa. Amazon Alexa and the smart home to supported devices that play nicely within its ecosystem makes it an extremely powerful gateway to the smart home. Before you can enjoy it, though, you're going to need some smart home devices. With most Echo smart speakers - especially the older and cheaper models - you will need to set up those devices as per the manufacturers' instructions, then head to the Skills tab within the Alexa app to get them paired up. Download the required skill for your device, sign in, and you'll then give Alexa control of that device. Paired devices will then appear within the Smart Home section of the app. Newer and higher end Echo smart speakers such as the 4th-gen Echo and the Echo Show models also double up as Zigbee smart home hubs though, meaning that not only can they directly communicate within the Smart Home section of the app. Newer and higher end Echo smart speakers such as the 4th-gen Echo and the Echo Show models also double up as Zigbee smart home hubs though, meaning that not only can they directly communicate within the Smart Home section of the app. certain smart home tech, but will often save you money as you won't need third party bridges and hubs when getting started with your smart speaker. You can also remove devices from Alexa at any time. How to create smart home groups with Amazon AlexaWhere things get really smart with using Amazon Alexa as a smart home hub is that it can take over control of a host of devices. By creating groups from within the Smart Home element of the Alexa app you can add any device into a single group, which can be controlled by voice. To start a group follow these steps:1. Open the Alexa app 2. Head to 'Smart Home' 3. Select 'Groups' 4. Tap 'Add group' 5. Choose 'Smart Home Group' and give it a name. 6. Tick the devices you'd like to add, and then you're done. A fine example is lighting, where you go to bed for example. Of course, you might not want every light turned off or on, so you can also separate them into other groups: "main lights", "lounge lights" etc. Import scenes which have already been set up within specific ecosystems. During a scan of your network, scenes will be added to the Alexa app, as long as they're set up and you've installed the relevant skills. Once registered in the app, you can then ask Alexa to control them. How to create Routines with AlexaA nice Alexa feature is Routines, which enable you to merge multiple smart home actions into one command. That could mean saying "Alexa, bedtime" and having all your downstairs lights turn off, and your bedroom lights turn on. This differs to Groups because a Routine can control the state of a device (e.g. the brightness of a light) and also lets you add music, radio or podcast choices. Check out our guide to Alexa Routines for a guide to setting yours up. Alexa shopping commands If you're an Amazon junkie for ordering, your Echo speaker can help you order items faster. If you find you're running low on a certain thing, there's no need to reach for your phone and open the app. Just tell Alexa using the following commands. "Alexa, order dog food on Amazon Prime" – If 1-Click ordering is turned on, this will automatically have the item sent to you and you'll be charged. "Alexa, add toilet roll to my cart" - This adds to your cart but doesn't purchase. "Alexa, cancel that order" - You have 30 mins after ordering for this to work. "Alexa, re-order toilet roll" - Alexa will search previously purchased items to suggest the brands you like. Amazon Echo tips and tricksThe Amazon Echo is a hugely diverse smart speaker - no matter which of the many versions you have. From the Amazon Echo Dot to the Echo Show range, there are loads of nifty ways to get more from Alexa. The beauty of voice commands is how varied the options and features are, but the Amazon Echo does so much that it's often difficult to know what's possible. That's where this tips and tricks guide comes in, where we aim to uncover some of Alexa's less obvious features. Enable Alexa Whisper modelf you're using Alexa at night, or when your partner's asleep, sometimes you don't want full volume responses. Whisper Mode solves just that. Say "Alexa, turn on Whisper Mode" to your Echo speaker. From now on, if you whisper to Alexa it will whisper back. Give it a try. Get Alexa to recognize voices in the homeAlexa supports different profiles, so you can sign in and out of Amazon ID. This means you will get personalised news, music and shopping, so for example, if you don't want your partners' sports bullet-ins you can get something that you do want. First train your voice. Say "Alexa, learn my voice" and follow Alexa's instructions. Now get the second person to install the app and sign in. On their app they should choose 'I'm someone else" and then Alexa will train their voice. Try our step-by-step guide to voice profiles and account switching for more detailed information. Video call using Skype on Echo ShowYes, Drop In and Alexa Calling is the staple of the Echo experience, but you can also use Skype if you prefer. First head to your Alexa app on your smartphone and try Settings > Communication > Skype and sign in with your account. When you want to make a call just say "Alexa, call Mom on Skype" (or whatever) and you're calling. Sharing accounts and switching profilesIt's time to stop being selfish and learn to share. Yes, Alexa might be your new best friend, but it's a friend to others, too. To that extent, you can store multiple accounts to use on a single Echo and jump between them simply by saying "Alexa, switch profile". To add additional accounts, you'll need to go into the app and head to Settings > Alexa Account > Amazon Household. You can also go through alexa.amazon.com. Here, you'll be able to enter the Amazon account details of the person you want to add to your profile. Can't remember who's account you're logged in with? No worries, you can figure it out just by asking "Alexa, which profile am I using?" Change the Alexa wake word and voice. Its name may have become synonymous with the Echo devices, but that doesn't mean you have to like it. Maybe your name's Alex and things are getting a bit confusing, or maybe your ex-partner's dog is called Alexa. Whatever your reasoning for wanting to change your Alexa just isn't ticking your boxes, you can use "Amazon", "Echo", "Ziggy" or "Computer" as your vocal cue instead. To make the switch, open the app and go to the Devices tab. Select the device and then tap Wake Word. In mid-2021, Amazon launched a new male voice is only available in the US at the moment. You can enable it by saying, "Alexa, change your voice."Set Spotify or Apple Music as your primary music source f you've been looking out for an Amazon Echo Spotify skill, you've probably noticed that, well, there isn't one. That doesn't mean you can't enjoy your Spotify as your Echo's default audio provider. 'How?' we hear you cry with thinlyveiled urgency. Well, in the app, head in the direction of Settings > Music and you'll be able to select your go-to streaming service of choice. Read this: Alexa and Spotify method above (which will re-route you to the Apple Music skill) or by hunting it down in the skill store. Set remindersWho needs a pen and paper when you have Alexa by your side. You can now say something to the effect of "Alexa, reminder to pick up your beloved child. You'd better - he knows Taekwondo. Clear your Alexa history Man the panic stations, this is not a drill. Alexa records everything you ask her and keeps a record of your questions that's visible on the smartphone app. Seriously. Don't want getting out into the wider world, you can simply delete them. If you're happy to do it manually, you can go into the Amazon Echo app to erase all trace of your shameful requests. You'll need to go to Settings > Alexa Account > History, Here, once you've selected the question you want to do away with, click the Delete voice recordings button at the bottom. Phew, crisis averted. Until the next time you ask something embarrassing, anyway. Easier than that though; say "Alexa, how do I review my privacy settings. Amazon's also added a voice shortcut to give people a simpler way to handle the same task. Just say, "Alexa, delete everything I said today" to get rid of all the recordings from that day. Did someone say "new bedtime routine"?Oh, and to delete your entire history of Alexa interactions, go to Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and click Manage Your Content and Devices on Amazon's website and Click Manage Your Content and Devices on Amazon's website and Click Manage Your Content and Devices on Amazon's website and Click Manage Your Content and Click Manage Your Co everything I've said." Get Alexa to repeat itselfAlthough it's got a slow, methodical delivery, if you're only half paying attention it can be easy to miss what Alexa's telling you. There's no need to repeat itself. Asking "Alexa, can you repeat that," or "Alexa, can you say that again" will get your digital assistant repeatings its latest response. It won't even get sassy for you having not paid proper attention the first time. Turn Alexa into a radio alarm clockOne of our favourite tips, you can have Alexa wake you up to a specific song, album, playlist of even radio station. Just say "Alexa, wake me up to [insert song or radio station] at [time]." You'll then get a more enjoyable wake-up call. Check out our full guide to cool ways to have Alexa wake you in the morning. Listen to podcasts type then Alexa can help you here as well. But this is two tips in one because it's also essential that you ignore Alexa's own podcasting capabilities and opt for the skill AnyPod. That enables better listening back, so episodes will play in the best order and resume where you left off. Just say "Alexa, enable AnyPod skill." If you're a Pocket Casts fan, that's also now available to use with Alexa, but personally AnyPod is still our go-to. Check out the latest best Alexa podcast skills. Change Alexa's voiceDid you know that you can change Alexa's accent? In the Settings menu for your device > scroll down to Language and choose from the list. You can pick from US, UK, Germany, Australian, Canadian, Japanese and even Indian English. Check out all the Alexa languages, accents and voices in our round-up. Make Alexa your default Android assistantAs an Alexa and Amazon Echo user, you're not confined to using it on your smart speaker. iOS and Android smartphone and tablet users can ask questions, access skills and control their smart home via the Alexa app. However, Android phone owners have the added benefit users can ask questions, access skills and control their smart home via the Alexa app. However, Android phone owners have the added benefit users can ask questions, access skills and control their smart home via the Alexa app. However, Android phone owners have the added benefit users can ask questions. of being able to make Alexa their default phone assistant. Here's how. Connect a Bluetooth speaker to take advantage of services like YouTube. To pair it with your phone, say "Alexa, pair" to start a search, and then complete the pairing process on your smartphone's Bluetooth menu. You can also pair your Echo directly with a Bluetooth speaker for better sound - find out how here. Make calls using AlexaAnother nifty new trick Alexa smartphone app, you can dial them up for a natter. Alexa uses your phone's address book to see who else has a Echo or is using the app, and to find them by tapping the on their name in the app. To answer an incoming call on your Echo, just say "Alexa, answer". Reset your Amazon EchoAs with all technology, the Echo isn't infallible. From time-to-time, things are bound to get a little squiffy. Thankfully resetting the Echo is easy and should hopefully fix your issues, although the process varies depending on which model you have. Head to our full guide which walks you through the different procedures. Use Alexa as a night lightThe neon blue ring portraying Alexa's mini-mind is a great way to know exactly when the screen-less device is at work, but it's not the only thing the light can be used for. While different colours and patterns can indicate whether you've missed a message, if the mic is turned off, or what volume you're sitting at, a third-party skill also lets the ring find use a night light. You'll have to enable the skill first, but once done all you need to say is, "Alexa, open Night Light for one hour," or however long you wish, and the light blue hue, you can also say "Alexa, stop." Set up multi-room audioIf you own multiple Echo speakers, you can create a multi-room setup. This includes some third-party Alexa speakers too, though not all. To get going, head to Devices in the app, tap the plus sign in the top-right corner and select Add Multi-Room Music Speakers. You'll need to give your group a name and then choose the speakers you want to include. Once it's all saved, just say "Alexa, play [music selection] on [group name]." More commands here. Force a system updateThough your app will let you know about new goodies that need to be downloaded, you can simply ask the Echo yourself. Sometimes it's quicker and you get a rundown by voice instead of reading about it. All you have to say is "Alexa, do you have any new features?" If it does, update away, if not, well at least there's plenty of skills to add. Mute the EchoAs we've mentioned, Alexa is always listening. Sometimes, however, you just want a bit of privacy and for your speaker to stop holding out for its wake word. It's a good thing then that you can plug its ears and mute the Echo for a while. Simply push the button with a slashed through microphone. A red ring will appear and the Echo will be muted. Push the button again to turn it back on. Stop sharing conversations as its way of improving the service. Google and Apple do it too, but if you want to opt out, you can. Just head to Settings > Alexa Account > Alexa Account > Alexa Privacy > Manage How Your Data Improves Alexa. There are two toggles here, one that's labeled Help Develop New Features and one for sharing messages with Amazon for the same purpose. You can turn them both off. Add skills with your voiceSpeaking of which, did you know you no longer need the smartphone app to add new Alexa skills to your Echo or Echo Dot. If you know there's a specific skill you're after, just ask for it. Simply saying "Alexa, enable a 7-minute workout," and the skills will automatically be added. You do have to know the Skill by name, and thanks to Echo's open API and growing support, that's getting increasingly tricky. Amazon Echo Skills have been rolling in thick and fast over the past couple of years. Not just random Skills Store fodder, either, but software that's ready to transform your smart speaker into a pizza-ordering, taxi-booking genius. Enjoy adding them. Do quick maths! you need to do sums but can't remember which 'random Skills Store fodder, either, but software that's ready to transform your smart speaker into a pizza-ordering, taxi-booking genius. crap' folder your phone's calculator is hidden in, why not just ask Alexa for some help? If you're dealing with a particularly large set of numbers that's easier to read off a screen than type out, you can rope your Echo in to do the work. Asking questions such as "Alexa, multiply 67 by 13" or "Alexa, what's 23% of 4,320" should see near instantaneous answer offered. It can do pretty long equations now, along with adding, subtracting, multiplying, dividing, square roots, power and factorials. Track your Amazon package? If you've ordered something from your Echo device, you can get an update from the speaker itself by asking, "Alexa, where's my stuff?". Now, the information isn't overly complex - with Alexa simply telling you the day the package(s) are expected to arrive - but we do expect this to flesh out as time goes on. If your order is of the Amazon Prime variety, you can also set up shopping notifications and see the Echo's light shine yellow when an update is ready. To enable this, open the Alexa app and head to Settings > Notifications > Amazon Shopping and then choose which notifications > Management of items, if one's a gift you don't want to spoil. Roll a diceIf, like us, the last time you played Monopoly your other half tipped over the board rather than paying that massive rental fee, chances are you're probably down a couple of dice. Fret not though, your board game sessions need never be interrupted again thanks to Alexa. Ask "Alexa, roll a die," or "Alexa, roll two dice," and it'll read out the results your digital die cast. Game On! Use non-supported smart home techYour Nest, Hue, Sonos or SmartThings connected devices might already play nice with the system, but there's a workaround for connected tech trying to go it alone. By downloading apps like Yonomi or IFTTT, you can find recipes or ways to sync up your smart devices. For example, while Echo supports Philips Hue and Lifx, there may be other smart lightbulbs the apps can control as well. Control your Fire TV using EchoYou can already chat to Alexa through the Fire TV Remote (or the downloadable app on your phone), but what if it's on the other side of the room - what then? Well, providing your Echo is in the reach of your voice and connected to the same Wi-Fi network as your Fire TV, you can use it to control the action. Simply using a compatible command, like, "Alexa, watch Tiger King," will pair the Echo and your Fire TV. That's if you only have one Fire TV device in operation, of course - otherwise, you'll have to assign control manually through the Alexa app under the Music, Video and Books section. Thankfully, though, for those who have multiple Echo devices in one room, you can assign more than one to control the Fire TV. Show Photos on Echo ShowIf you have an Echo Show then it makes a perfect digital photo frame. To get your own shots on screen you can use the Amazon Photos service – but we're guessing you'll probably want to use Facebook. In the Alexa app go to Settings > Photos and link your Facebook. Alexa Drop In and CallingThe Alexa Calling feature enables you to make calls between Alexa devices or via the Alexa app - supported on iOS, Android phones and tablets, including Amazon Fire products as well. To make an Alexa call, you can just ask "Alexa call [contact name]," or go to the Conversations tab within the Alexa app and pick a contact from there. Drop In works slightly differently. Drop In with Alexa enables you to call and talk to another Alexa, drop in on the [say Echo device name]" to be patched into other areas of your home, and immediately get two-way audio. There's no opt-in approval for Drop In within registered Echo devices on your network. And there's one final way Drop In works. You can Drop In to any of your contacts who own an Amazon Echo and also take a look at taking things further with an Echo Connect. Alexa Guard Plus Amazon's Alexa Guard Plus has just been announced - a huge boost for the platform that adds a bunch of new features into the mix. When enabled, Guard has your speakers listen out for sounds of breaking glass or smoke/CO2 alarms, and will notify you if it detects anything. It can also be used to simulate someone being in your home when you're away - by switching smart lights on and off - to scare off any chancing burglars, or by playing the sounds of barking dogs. It also - with a few select brands - acts as a companion to your existing home security system setup; being able to interact with live monitoring services and the like. Amazon Echo and Alexa. Any connected device in your home can be hacked - and is vulnerable to anyone with serious intent. Alexa does store voice recordings in the cloud, which again could theoretically be accessed in an attack. A proof of concept attack in August 2017 showed that malware could be installed onto an Echo to make it eavesdrop on a user but again, it's a highly complex process that would be near impossible to pull off. But yes, connected technologies carry that risk. Latest Alexa Hunches is a feature that better understands your routines and suggests things to you. So, for example, if you tell Alexa you're about to go to bed, it'll let you know if your front door is unlocked, or your basement light is still on. An update to this feature landing before the end of 2019 will also suggest routines you may want to set up based on your daily habits. Email integrationAmazon says you can link your Gmail, Outlook.com, Hotmail and Live.com accounts to Alexa, and ask "Alexa, check my email" for a summary of your messages from the last 24 hours. You can read, reply, delete or archive messages, and check for messages from specific people. Free Time Amazon's Alexa can automatically shift to a kid's profile when it recognizes a younger voice, bringing the parental controls that are part of the Kids + feature set to any Echo device in the house. Once enabled, Alexa will provide kid-friendly responses no matter which device they talk to - not just on the kid-focused new Echo Dot models. Reading SidekickAnother new feature that's good for children is Reading Sidekick, which is designed to help Alexa build fluency and encourage a love for reading well and offering support when they struggle. Routines improvementYou can now stagger Alexa routines, so if your alarm goes off at 7am you can have the headlines read at 7.30am, for example. At the big September 2020 Echo launch event Amazon also detailed how improved noise detection would be added to the mix later this year. A baby crying or someone coughing or snoring were all sounds that were mentioned, with the idea being that you'll be able to set up Alexa Routines based on these noises. Examples include switching the lights on in your bedroom when Alexa detects the sound of a baby crying, or turning on white noise if your partner's snoring is detected in the night.
